Computer Warehouse - II  
123 My Way, Suite 100  
Boston, CA 02178

Greetings and welcome to the new standard for the next generation R:BASE reporting!

Over the past several months, we have received many questions about the next generation R:BASE and the history behind this product. When we first starting getting into desiging, we were amazed at what could be accomplished using all the slick object-oriented tools. It is a tribute to the architects of R:BASE that they were able to design something so powerful that it could actually be used to demonstrate the power itself! Then we hit a wall - there were no integrated tools available for building the type of professional quality reports to which we, and more importantly our clients, were accustomed. We started by taking the best features from the existing report designers we had worked with in the past. We then combined object-oriented design principles and our relentless pursuit of quality. The result is a product that has quickly become the development tool of choice among R:BASE novices and experts alike.

"All-in-One" next generation R:BASE, R:BASE 7.6 for Windows is a completely new RDBMS environment which includes all the latest GUI features for every designer and wizard while utilizing the legacy of the R:BASE engine as a foundation of stability. R:BASE 7.6 for Windows is completely compatible with version 6.5 and higher databases, and includes Converters to convert all existing Forms, Reports, and Labels; thus, saving you the overwhelming job of redesigning completely new ones.

Along with over 90 new Form objects and over 20 new Report objects, R:BASE 7.6 boasts: a fully re-engineered Database Explorer; R:BASE Editor; Drag-and-Drop QBE Query Builder; Modularized Application Designer; Powerful File Gateway Utility; Built-In Form, Report, and Label Wizards; a Multi-Level Interactive Trace Debugger; and an Integrated NOTE/VARCHAR/BLOB Data Manager.

We would like to invite you to take a look at the features of R:BASE 7.6 at our web site [www.rbase.com](http://www.rbase.com). Afterwards, drop us a line at [info@rbase.com](mailto:info@rbase.com). We always love to hear from fellow R:BASE enthusiasts.

Sincerely,

The RBTI Dream Team

62 Main St  
Lynnwood, WA 98037

Greetings and welcome to the new standard for the next generation R:BASE reporting!

Over the past several months, we have received many questions about the next generation R:BASE and the history behind this product. When we first starting getting into desiging, we were amazed at what could be accomplished using all the slick object-oriented tools. It is a tribute to the architects of R:BASE that they were able to design something so powerful that it could actually be used to demonstrate the power itself! Then we hit a wall - there were no integrated tools available for building the type of professional quality reports to which we, and more importantly our clients, were accustomed. We started by taking the best features from the existing report designers we had worked with in the past. We then combined object-oriented design principles and our relentless pursuit of quality. The result is a product that has quickly become the development tool of choice among R:BASE novices and experts alike.

"All-in-One" next generation R:BASE, R:BASE 7.6 for Windows is a completely new RDBMS environment which includes all the latest GUI features for every designer and wizard while utilizing the legacy of the R:BASE engine as a foundation of stability. R:BASE 7.6 for Windows is completely compatible with version 6.5 and higher databases, and includes Converters to convert all existing Forms, Reports, and Labels; thus, saving you the overwhelming job of redesigning completely new ones.

Along with over 90 new Form objects and over 20 new Report objects, R:BASE 7.6 boasts: a fully re-engineered Database Explorer; R:BASE Editor; Drag-and-Drop QBE Query Builder; Modularized Application Designer; Powerful File Gateway Utility; Built-In Form, Report, and Label Wizards; a Multi-Level Interactive Trace Debugger; and an Integrated NOTE/VARCHAR/BLOB Data Manager.

We would like to invite you to take a look at the features of R:BASE 7.6 at our web site [www.rbase.com](http://www.rbase.com). Afterwards, drop us a line at [info@rbase.com](mailto:info@rbase.com). We always love to hear from fellow R:BASE enthusiasts.

Greetings and welcome to the new standard for the next generation R:BASE reporting!

Over the past several months, we have received many questions about the next generation R:BASE and the history behind this product. When we first starting getting into desiging, we were amazed at what could be accomplished using all the slick object-oriented tools. It is a tribute to the architects of R:BASE that they were able to design something so powerful that it could actually be used to demonstrate the power itself! Then we hit a wall - there were no integrated tools available for building the type of professional quality reports to which we, and more importantly our clients, were accustomed. We started by taking the best features from the existing report designers we had worked with in the past. We then combined object-oriented design principles and our relentless pursuit of quality. The result is a product that has quickly become the development tool of choice among R:BASE novices and experts alike.

"All-in-One" next generation R:BASE, R:BASE 7.6 for Windows is a completely new RDBMS environment which includes all the latest GUI features for every designer and wizard while utilizing the legacy of the R:BASE engine as a foundation of stability. R:BASE 7.6 for Windows is completely compatible with version 6.5 and higher databases, and includes Converters to convert all existing Forms, Reports, and Labels; thus, saving you the overwhelming job of redesigning completely new ones.

Along with over 90 new Form objects and over 20 new Report objects, R:BASE 7.6 boasts: a fully re-engineered Database Explorer; R:BASE Editor; Drag-and-Drop QBE Query Builder; Modularized Application Designer; Powerful File Gateway Utility; Built-In Form, Report, and Label Wizards; a Multi-Level Interactive Trace Debugger; and an Integrated NOTE/VARCHAR/BLOB Data Manager.
